

Product Application Case Study BRICK

This was a complete face lift of an old fashioned brick finish.

The entire brick wall area was covered with 'Belka'. The brief from the DIY owner was to completely hide the existing brickwork, to create warmth and depth to what was previously a cold and stark room but overwhelmingly they had a desire that the solution was a natural healthy alternative.

The result far exceeded the home owners expectations. The natural materials that make up Belka and the textured finish now created an inviting environment by offering diffused and subtle lighting throughout the room. The added benefits of the Belka material and its textured finish substantially reduced noise echoing around the room.

The room has been transformed from a cold concrete looking cave to a warm and inviting room that all the family enjoys.

The installation of 'Belka' took one weekend to create a practical and high-end finish without ever releasing any smell or harmful VOC's into their home.

Belka can also be a one coat render. It has the ability to be applied in varying thicknesses up to 10mm thick. Belka has a degree of elasticity which allows it to act as a crack and joint filler.
