

Product Application Case Study PLASTERBOARD

This was a complete kitchen remodel.

All the old cupboards were removed and a new redesigned cabinet layout was installed.

The contractor was left with the problem as to how best cover up the gyprock that was now visible and full of holes, scratches and uneven surfaces. Normally they would have to spend many hours filling all these areas and sanding numerous times in order to create a smooth level surface suitable for painting.

The home owner did not want fine dust throughout the house, nor did they want to tile the entire kitchen. The contractor suggested applying one coat of natural 100% VOC free Belka, offering seamless coverage, hide all imperfections and give them a designer finish to further compliment their new look kitchen.

The installation of 'Belka' took one hour to create a practical and high-end finish.

Belka has anti-static properties, which means that dust and dirt will not settle in or on the finish.

After 2 years in a kitchen environment this coating looks as good as the day it was installed.
