

Product Application Case Study: Previously Painted Surfaces

Belka is fast becoming the product of choice for Interior designers and Builders looking to add dimension and sophistication to their projects that you just can not do with paint and cement renders.

Belka can be applied over all painted surfaces including high gloss finishes.

'Belka' can also be used as a joint filler so no surface preparation to even out or fill cracks, gouges etc. needs to be done. It is truly a remarkable one-coat system.

Because Belka is made from cotton the added benefits from installing 'Belka' to your interior walls is that it decreases sound reflection; Preserves room thermal balance and Diffuses light reflection.... giving a more natural dynamic to any room.

A commercial tradesman/ plasterer/ renderer can install approximately 80 m² of 'Belka' in a working day (on flat surfaces).

Belka has anti-static properties which stop dust and dirt accumulating on it. However should grubby little hands leave marks 'Belka' is washable. Mild soapy water and a sponge is all that it takes.
