

Product Application Case Study Home Entertainment / Sound Studio Rooms

The main purpose of every home theatre is to bring the big movie experience into the comfort of your own home.

A big dilemma has been 'How to' decorate the walls of an Entertainment room that will give the ultimate movie experience but still looks great when not in use as a home media room. This has always proven to be a compromise.....until now!.

'Belka' is made from cotton and has a soft subtle textured finish which offers exceptional acoustic / sound absorbing properties.....which means big clear sound. Distortion occurs when sound bounces around off painted walls.

Another important element that Belka brings to your media experience is the beautiful way light is diffused off the Belka walls rather than reflected or amplified. Reflected light is the fastest way to kill a movie experience.

Belka offers Fantastic depth of colour and finishes, teamed with its acoustical properties will help make your Media Room truly come to life day and night and creates a more authentic experience.

Belka absorbs sound and is ideal for home and commercial installations, from Hotel lobby's to home theatre rooms.
